## Part-time Statistical Help Needed

The Canadian Scleroderma Research Group is a pan-Canadian group that has been conducting research in a rare disease called Scleroderma since 2004.

We have a database of over 1600 patients and have published over 160 papers using that longitudinal data.

We are looking for someone who would be interested in helping us with our current work. The amount of work would be variable and dependent on the project. You would be paid on an hourly basis for your help.

All your work could be from your own location. Our current statistician is leaving Canada but would be available to help you with the database.

At least a master's degree in either statistics or epidemiology would be required.

Please contact me by email if you are interested and attach a CV.

Murray Baron, MD, FRCP (C)
